

**Лабораторная работа №5 по курсу  
«Базовые компоненты интернет-технологий»**

Выполнил: Саврасов П.А. Группа РТ5-31

## Описание задания лабораторной работы.

Разработать программу, реализующую вычисление расстояния Левенштейна с использованием алгоритма Вагнера-Фишера.

## Текст программы на языке C#.

Класс Form1:

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Windows.Forms;
using System.Diagnostics;

namespace LR4
{
    public partial class Form1 : Form
    {
        public Form1(List<string> Words)
        {
            Words2 = Words;
            InitializeComponent();

        }
        List<string> Words2 = new List<string>();

        #region Empty Elements
        void ComboBox1SelectedIndexChanged(object sender, EventArgs e)
        {
        }

        void ComboBox2SelectedIndexChanged(object sender, EventArgs e)
        {
        }

        void TextBox1TextChanged(object sender, EventArgs e)
        {
        }

        void ListBox2SelectedIndexChanged(object sender, EventArgs e)
        {
        }

        void TextBox2TextChanged(object sender, EventArgs e)
        {
        }

        }

        #endregion

        #region Search
        void Button1Click(object sender, EventArgs e)
        {

```

```

        if(comboBox1.Text=="") MessageBox.Show("Chose Quantity of
treads.", "Error!", MessageBoxButtons.OK, MessageBoxIcon.Error);
    else
    {
        if(comboBox2.Text=="") MessageBox.Show("Chose
Distance.", "Error!", MessageBoxButtons.OK, MessageBoxIcon.Error);
    else
    {
        if(textBox1.Text=="") MessageBox.Show("Enter
Word.", "Error!", MessageBoxButtons.OK, MessageBoxIcon.Error);
    else
    {
        List<string> Rezult = new List<string>();
        int A = (int.Parse(comboBox1.Text));
        int B = (int.Parse(comboBox2.Text));
        string S = (textBox1.Text);
        Stopwatch St2 = new Stopwatch();
        St2.Start();
        ASearch ASH = new ASearch();
        Rezult = ASH.ASearcher(Words2, A, B, S);
        textBox2.Text=St2.Elapsed.ToString();
        listBox2.BeginUpdate();
        listBox2.Items.Clear();
        foreach(string STR in Rezult)
            listBox2.Items.Add(STR);
        listBox2.EndUpdate();
    }
    }
}
}

#endregion
}
}

```

### Класс ASearch:

```

using System;
using System.Collections.Generic;
using System.Linq;

namespace LR4
{
    class ASearch
    {
        List<string> Rezult = new List<string>();
        public List<string> ASearcher(List<string> Words, int NumberOfTreads, int MaxDistance, string
ComWord)
        {
